Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

Claim 5 is objected to because of the following informalities: In the claim, "causing a purge valve to comprises delivering" is confusing. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamartino et al.

Yamartino et al disclose in column 7 lines 8-32 that a "safety inhibit" is invoked when the cryopump reaches below a specific temperature (18K). When the safety inhibit has been set and the temperature reaches a higher limit (34K in column 8 line 31) a gate valve is closed and purge gas is admitted. The "safety inhibit is seen as performing the same function in the same manner as the "identifier" in applicants' claims. The paragraph beginning in line 51 of column 7 discloses opening the purge valve without a full regeneration (the full regeneration option is discussed in the following paragraph).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Buonpane et al, both Gaudet et al patents, Morishita et al,

Art Unit: 3744

Andeen et al, Weeks et al, Okumura et al and Haefner show control systems for cryopumps.
